SPRINGBACK

## Application

The JOVENTA SPRINGBACK electric, spring return damper-actuator series has been specially developed for the motorized operation of safety air dampers (anti-icing) in air conditioning systems, smoke evacuation dampers and sealing dampers. When the control signal is applied the actuator drives the damper to the operational position, while evenly tensioning the integrated spring. After a power failure the stored energy in the spring immediately brings the damper to the safety position. Manual operation is automatically cancelled when the actuator is in electrical operation.
The compact design and universal adapter fitted with limitation of rotation angle make this JOVENTA actuator highly versatile.

## Key features

- DCO... 10 V or $0 . . .20 \mathrm{~mA}$ control
- Load-independent running time
- Up to 5 actuators in parallel operation possible
- Plug-in terminal block connection
- Simple direct mounting with universal adapter on $\varnothing 10-\mathrm{mm}$ to $20-\mathrm{mm}$ shaft or $10-\mathrm{mm}$ to $16-\mathrm{mm}$ square shaft. $77-\mathrm{mm}$ min shaft length
- Selectable direction of rotation
- Limitation of rotation angle
- Manual positioning with crank handle
- 2 adjustable auxiliary switches See back page for settings
- Automatic shut-off at end position (overload switch)
- Energy saving at end positions
- Actuators available
with 1 m halogen-free cable
- Customized versions available
- Devices meet CE requirements

## Accessories

- ZK damper linkage selection
- ZKG ball joints
(see data sheet 6.10)

## Nomenclature/Specification/Technical data

DMI.1F
AC/DC24V
DM1.1FS AC/DC24V with 2 auxiliary switches
.......K with 1 m halogen-free cable

| Actuator | DM1.1F(S) |
| :---: | :---: |
| Torque | 16 Nm |
| Damper area* | 3.0 m ${ }^{2}$ |
| Running time motor | 90 s |
| Running time spring return | 10 s |
| Supply voltage | AC/DC24V |
| Frequency | $50-60 \mathrm{~Hz}$ |
| Power consumption |  |
| - Running | 7.0 W |
| - At end position | 0.6 W |
| Dimensioning | 12.0VA / 6A @ 2 ms |
| Weight | 2.7 kg |
| Control signal Y1 | DC0...10V |
| Control signal Y2 | $0 . .20 \mathrm{~mA}$ |
| Position signal U | DC0...10V |
| Angle of rotation / working range | $90^{\circ}$ (93 ${ }^{\circ}$ mech.) |
| Angle of rotation / limitation | $0^{\circ} \ldots .30^{\circ}$ and $90^{\circ} \ldots .60^{\circ}$ |
| Service lifetime | 60,000 rotations |
| Auxiliary switches | 3(1.5)A, AC230V |
| Setting range / adjustable | $5^{\circ}$... $85^{\circ}$ < infinity |
| Noise level | $50 \mathrm{~dB}(\mathrm{~A})$ |
| Protection class | 11 |
| Degree of protection | IP 54 |
| Cable aperture connection | PG 11 |
| Mode of action | Type 1 |
| Ambient conditions |  |
| - Operating temperature | $-20 . .+50^{\circ} \mathrm{C} /$ IEC 721-3-3 |
| - Storage temperature | $-30 \ldots+60^{\circ} \mathrm{C} /$ IEC 721-3-2 |
| - Humidity | 5...95\% r.F. |
| Service | Maintenance free |

## The Actuator Maker

Action d2
Self-adapting d1

## Control signal: Factory setting

| Control signal Y 1 Input resistance | $\begin{aligned} & \mathrm{DCO} . .10 \mathrm{~V} \\ & \mathrm{Ri}=200 \mathrm{k} \Omega \end{aligned}$ | Micro-switch d1 |  |
| :---: | :---: | :---: | :---: |
|  |  | self-adapting | self-adapting |
| Control signal Y2 | 0... 20 mA | OFF | ON |
| Input resistance | $\mathrm{Ri}=388 \Omega$ | ON | ON |
| Position signal U | DC0...10V | - |  |
| Load resistance | $\mathrm{R} \geqslant 10 \mathrm{k} \Omega$ | $1{ }_{1}^{1}$ | 2 |

The self-adapting mode is activated by switching the micro-switch $\mathbf{d 1}$ to $\mathbf{O N}$. In this mode the running time, control signals Y 1 and Y 2 and the output signal U will set to match the mechanically selected range of rotation. The minimum working range that can be adapted to is $30^{\circ}$. During the self-adapting procedure the actuator finds and stores both end positions. Even after a power failure the stored values can be recalled.
If the angle of rotation is changed the actuator will automatically match the new working range.

## Changing the control signal setting

The potentiometers $\mathbf{O}$ and $\mathbf{S}$ help to match control signals Y 1 and Y 2 to any make of controller.

## Example 1

Control signal Y 1 working between
DC2...10V
Setting: Starting point $\mathbf{O}=2$ Working range $\mathbf{S}=8$

## Example 2

Control signal Y2 working between 6... 18 mA
$\begin{array}{ll}\text { Setting: } & \text { Starting point } \quad \mathbf{O}=3 \\ & \text { Working range } \mathbf{S}=6\end{array}$

Start-point $\mathbf{O}$

|  | Scale 0 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | for Y1 (VDC) | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| ${ }_{0}{ }_{8}$ | for Y2 (mA) | 0 | 2 | 4 | 6 | 8 | 10 | 12 | 14 | 16 |

Working range $\mathbf{S}$

| Scale S | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| for $Y 1(\mathrm{VDC})$ | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| for $Y 2(\mathrm{~mA})$ | 4 | 6 | 8 | 10 | 12 | 14 | 16 | 18 | 20 |

## Action Setting

The action of control signal $Y 1$ and $Y 2$ can be reversed by switching the micro-switch d2.
This reverses the action of the output signal $U$.

Normal operation. By increasing control signal Y 1 or Y 2 , tensioning of the spring will occur.

Reverse operation. By decreasing control signal Y1 or Y2, tensioning of the spring will occur.

The Actuator Maker

SPRINGBACK

Auxiliary switches (S)

3(1.5)A, AC230V Actuator at $0^{\circ}$ position

## Parallel operation

For parallel operation of the actuators $\mathrm{DM} 1.1 \mathrm{~F}(\mathrm{~S})$,
the DCO... 10 V output signal $\mathrm{U}=\mathrm{DCO} . .10 \mathrm{~V}$
is connected, from the master actuator trough terminal 6,
to the slave actuator trough terminal 5 etc.

## Caution:

Parallel connection of up to a maximum of 5 actuators possible.

## Position transmitter

The actuator DM1.1F(S) can also be controlled using the JOVENTA Positioner (PA-PF) with control signal of DC0...10V. For further information concerning the PA and PF Positioner please refer to data sheet 6.20.

## Caution:

Parallel connection of up to a maximum of 5 actuators possible.

## Override control

The actuator DM1.1F(S) can be forced to override control when wired in accordance with the relevant diagram on the left.

Switch position:
$1=$ Actuator runs at 10 V
2 = Actuator runs at 0 V
3 = Automatic control operation

## Auxiliary switch settings

Factory setting
Switch a on $10^{\circ}$
Switch bon $80^{\circ}$

The switching position can be manually changed to any required position by turning the ratchet.

## The Actuator Maker

## Dimensions in mm

## Changing the direction of rotation

The change in rotation direction is achieved by removing the adapter bush from one side and replacing it in the other side.

## Factory setting:

 Clockwise rotation.
## Angle of rotation

The $90^{\circ}$ angle of rotation/ working range can, through segments 1 and 2, be reduced by up to $30^{\circ}$ from both end positions.

## Changing the direction of rotation

## Limitation of rotation angle
